

**AMENDMENTS TO THE SPECIFICATION**

Page 7, paragraph 2

Transition collar 14 has a circumscribing cylindrical outer wall portion 50, an outwardly projecting tubular pouring ~~snout~~ spout 52, a drain-back shoulder 57 having a frusto conically configured upper surface and an inclined drain back partition 55. The drain back partition 55 and shoulder 57 essentially create a transverse partition which separates the outer wall portion 50 into top and bottom sections and has a hole 54 which serves as both a vent and a drain extending through the lowermost portion of drain back partition 55.
